

ICRERA 2025

14th INTERNATIONAL CONFERENCE ON RENEWABLE ENERGY RESEARCH AND APPLICATIONS

Paper ID: 254

Title: Performance Analysis of Models for Short-Term Building-Level Load Forecasting

Bio: **Alejandro Fernández Benages** is a Research Engineer at the Catalonia Institute for Energy Research (IREC), within the Energy Systems Analytics group.

With over 20 years of experience in industrial engineering, data science, and renewable energy, his work focuses on developing algorithms for forecasting energy demand and PV generation, and on optimizing distributed energy resources and hydrogen-based flexibility strategies.

Before joining IREC, he led R&D projects in industrial automation and predictive maintenance, and co-founded initiatives dedicated to small-scale wind and solar energy systems.
