

Ryoma Iki graduated from Tokyo University of Science in 2025 and is currently an undergraduate student in Department of Electrical Engineering, Graduate School of Science and Technology, Tokyo University of Science. His research interest includes estimation of states on water electrolyzers using machine learning and estimation of equivalent circuits from impedances.

Paper ID: 278

Paper Title: Estimation of State Imbalance in a Proton Exchange Membrane Water Electrolyzer Stack Using Electrochemical Impedance Spectroscopy and Machine Learning
