Title: Experimental Evaluation of a Hydrogen Generation System for Fuel Cells Using  $\text{NaBH}_4$  and  $\text{B(OH)}_3$  with Pressure Control

#### Short CV

Keigo Matsui received the B.Eng. degree in Electrical Engineering from Tokyo University of Science, Chiba, Japan, and is currently working toward the M.Eng. degree at the same university.

The current research focuses on the configuration of hydrogen generators and energy management strategies for hydrogen hybrid systems.
